250mm, 280mm, 300mm, 315mm

As per DW/144 our single blade balancing dampers have a single pivoted blade contained within a casing. The blade is adjustable through a nominal 90° angle by means of a quadrant. To automatically control the damper an extended spindle can be added to enable the mounting of a powered actuator. In order to comply with DW/144, single blade balancing dampers are supplied up to a maximum diameter of 315mm.
